   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

   score greater and is derived
Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being pu and is derived by analysis of the total score distribution.
                                                                                                                                                     A_Geneseq_032802:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence was used for comparison with the Stachybotrys chartarum phenol oxidising enzyme. The invention relates to detergent compositions comporising one or more surfactants and a phenol oxidising enzyme having at least 68% identity to the Stachybotrys chartarum phenol oxidising enzyme. Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to another during detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, bleaching the colour of stains on fabric and in detergent and textile applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New detergent compositions comprising a phenol oxidizing enzyme useful in detergent or cleaning compositions, fiber treatment, processing,

                                                                                                                                                      The present sequence is a Stachybotrys chartarum phenol oxidising enzyme. The invention relates to detergent compositions comprising one comore surfactants and a phenol oxidising enzyme having at least 60% identity to the Stachybotrys chartarum phenol oxidising enzyme. Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to another during detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, bleaching the colour of stains on fabric and in detergent and textile
                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                     Claim 1; Fig 2; 46pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of Stachybotrys chartarum MUCL 38898 phenol oxidase B, as deduced from isolated genomic DNA (see AAF30028). The invention provides phenol oxidising enzymes such as phenol oxidase B, or enzymes having at least 688 identity to it, nucleic acids encoding them, expression vectors, filamentous fungus and yeast host cells, and methods for the recombinant production of the phenol oxidising enzymes. The enzymes are useful for bleaching pulp and paper, fabric stains, and in detergent and textile applications. They show optimal activity at pH range 5-11, 7-10.5 or 8-10, and at 20-60 or 20-40 degree C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                 fungus Acremonium murorum. The enzyme has the CBS accession number 157.72. The enzyme catalyses redox reactions and is specific for molecular oxygen as the electron acceptor. The phenol oxidising enzy is specifically used in detergents for bleaching strains on fabrics, but also for bleaching pulp and paper and for decolourisation of plant-derived food products. The enzyme has a pH optimum in the alkaline to neutral range and can bleach a wide variety of coloured compounds, e.g. porphytins, tannins; polyphenols, carotenoids, anthocyanins and Maillard reaction products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B
                                                                                    The present sequence is that of the Bipolarius spicifera phenol oxidising enzyme. The invention relates to detergent compositions comprising novel phenol oxidising enzymes that have at Cleast 60% identity with the phenol oxidising enzyme of Stachybotrys Chartarum (see AAY95537), and which are obtained from a bacterium, yeast or non-Stachybotrys fungus, especially B. spicifera, Curvularia pallescens (see AAY95539) and Amerosporium atrum (see CC AAY95540). The phenol oxidising enzyme is capable of modifying the CC colour associated with dyes or coloured compounds, and can be used CC fabric and for anti-dye transfer in detergent and textile CC fabric and for anti-dye transfer in detergent and textile CC the absence or presence of an enhancer. Expression vectors and CC the cells comprising a nucleic acid encoding a phenol oxidising CC enzyme, methods for producing the phenol oxidising enzyme, and the constructing expression hosts are provided.

Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to the Stachybotrys chartarum DNA (AAA51313) are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or coloured compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.
